

Q. Saad wants to conduct survey on various topics. He has various parameters for each topic. But he doesn't want to create separate form for each. He has json format input for each topic. Topic may contain step wise form. Each step is tab in a form which may be more than two. Saad also want stepwise form validation. After all the completion of step saad wants JSON output of form values (You can print it on console).

Example:

```
[
  {
    stepName: 'Step 1',
    Controls: [
      {
        Field: 'First Name',
        Type: 'text',
        Required: true,
        Length: 30
      },
      {
        Field: 'Last Name',
        Type: 'text',
        Required: true,
        Length: 30
      },
      {
        Field: 'Address',
        Type: 'textarea',
        Required: true,
        Length: 300
      }
    ]
  },
]
```

```

{
  stepName: 'Step 2',
  Controls: [
    {
      Field: 'Interested In?',
      Type: 'checkbox',
      Required: true,
      Options: ['Books', 'TV', 'Video games']
    },
  ],
},.....
]

```

Output:

Step 1

Step 2

First Name

Last Name

Address

Next

Step 1

Step 2

Interested In?

☐ Books
   
☐ TV
   
☐ Video games
